

Review of the supervisor Mgr. Dinara Sobola, PhD. to diploma thesis “Structural and electrical properties of PVDF-CNT composite” written by Bc. Denis Misiurev

The topic of the thesis is relevant in the field of electroactive materials. The information in this thesis is presented by the author systematically. Number and complementary character of the experiments confirm the reliability of the obtained data.

The author extensively presented both theoretical and practical parts. There are no contradictions in the work and the conclusions are clear and well-grounded. This work is of practical importance.

Although the semantic part of the work is well organized, the formal part contains a number of errors. The stylistic features of the English language are pure. The grammar, clarity and accuracy of the thesis need improvement.

During the work, Bc. Denis Misiurev showed creativity, hard work and independence. The data were presented at conferences. All experiments were carried out directly by him or with his participation.

Despite the above stylistic and linguistic shortcomings, the work is of scientific interest from a practical point of view. Therefore, I recommend this thesis for defence, and assess it by 90 points or the corresponding grade A.
