

Supervisor assessment of Master's Thesis

Student: Li You

Title: Multispectral Image Processing (id 23829)

Supervisor: Zemčík Pavel, prof. Dr. Ing., DCGM FIT BUT

1. Assignment comments

The assignment of the work was moderately demanding. It required studies slightly beyond the topics covered by MSc education but the implementation part assignment was not too difficult to fulfill. The assignment allowed for creative extensions that were, to some extent, used.

2. Literature usage

The student was quite active in literature research. She was not only following the recommendations but she actively searched the literature on her own and found nice study sources.

3. Assignment activity, consultation, communication

The student was moderately active throughout the school year; however, she did not consult as much as necessary except for the end of the summer semester, although I asked her to do so few times, probably she was quite shy and/or affected by medical matters. Unfortunately, in the extended period the study and medical conditions did not allow for update of the thesis as much as it would be desirable.

4. Assignment finalisation

Because of the delays in consultations, the work was not finished quite in time and an extended time was requested by the student. In the extended time, the final version of the text has been available also for a short time only and while it was repeatedly reviewed and the final version was consulted, the shape of the final version is not what it should be.

5. Publications, awards

-

6. Total assessment

good (C)

The student was working throughout the year and despite some deficit in consultations, she managed to do her work with a reasonable success. While the implementation part of the work can definitely be improved as well as the text of the thesis, I anyhow perceive that the effort of the student was quite high and therefore my evaluation especially of the effort is "good".
